Dear Mr Scholey,

I am writing to you with some ideas to help reduce our carbon footprint.

The first idea is to put more solar panels on the top of the buildings, particularly the sports hall because it is big so we can fit a lot of them and it might encourage other schools to do the same.

The second idea is to get rid of the teachers' car park and plant more trees there. I also think it would be a good idea if instead of the visitor car park we had more bike racks so we could encourage more people to cycle to school instead of driving and using petrol.

My final idea is we calculate the carbon footprint of all the boys at the school this means calculating the CO₂ from commuting to and from school as well as CO₂ generated from daily school activities. Knowing this, we could then reduce and offset our carbon emissions and potentially lead the way as the first carbon negative school.

Yours sincerely,

Oscar W
